HARBOURLINE MAINTENANCE DESK

Recording test script

What to say or type for each live input, and what should appear on screen. Page 1: inputs. Page 2: the recording run sheet. App at **localhost:3000**.

Before you record

- [ ] Run **npm run check** (reloads the 8 weekend requests, about 90 s, should say all checks passed)
- [ ] In Airtable Requests, delete any old Portal and Voice test rows
- [ ] Board shows **Showing 8 of 8 requests**, gas leak at the top
- [ ] Tabs open: Triage board, Talk to Jane, Portal, Reports
- [ ] **sink-leak-photo.jpg** ready to attach (kit folder)
- [ ] Microphone allowed in the browser; quiet room

Input 1: voice call, Power points (the main voice demo)

Where: Talk to Jane, press **Start call**. Keep the board open in another tab so it triages the call.

Say:

> *"Hi, two power points in the kitchen at 69 Lakeside Court, Toowong stopped working a week ago and it's stayed the same. No sparks or burning smell. You can call me back on 0400 000 002. I work from home so any time is fine, there are no pets and no lockbox."*

Jane reads the address back: say "yes, that's right". Answer anything else briefly, then hang up (End call). Say "Court", not "Ct" or "Crescent".

- [ ] Live transcript shows Caller and Jane lines
- [ ] Two-sentence summary appears after you hang up
- [ ] Within about 20 s a **Voice** card appears on the board, "Triaging with Sonnet 5.5..." then triaged
- [ ] Urgent and **Repeat fault** flag
- [ ] Header: **HPM-1207 - 69 Lakeside Ct, Toowong**
- [ ] Details: Tradie Brightline Electrical; Callback 0400 000 002; Access line (home, no pets, no lockbox)

Input 2: voice call, Hot water (optional: shows "never guess")

> *"Hi, the hot water's stopped at 18 Ferndale St, Wilston. It went cold this morning and there's no leaking or smell. You can call me back on 0400 000 001. For access, the key's in the lockbox by the front door, and there are no pets."*

- [ ] Emergency (no hot water) with the **Call back** flag and no property ID: the only property at 18 Ferndale St is unit 4, so it won't guess

Input 3: portal request with a photo (the live demo moment)

Where: Portal. Use the Copy buttons on the sample card, or type:

ADDRESS

```
9 Riverview Tce, Carindale
```

DESCRIPTION

```
Water is pooling under the kitchen sink and the cupboard floor is soaked. It looks like it's coming from the pipe under the basin. It's been getting worse since this morning.
```

Photo: attach **sink-leak-photo.jpg**, then **Send request**.

- [ ] "Triaging with Sonnet 5.5... N s" counts up (about 10 s)
- [ ] Drafted tenant reply appears with an Urgent badge
- [ ] Board: Portal card **HPM-1013 - 9 Riverview Tce, Carindale**
- [ ] Details: **Photo** line describes water under the sink; Tradie Coastline Plumbing; ends "Triaged by Sonnet 5.5"

HARBOURLINE MAINTENANCE DESK

Recording run sheet (about 2 minutes)

Same order as the stage demo. For the video you can make the Power points call live in the 0:45 slot; on stage, show an earlier call instead.

TIME	SCREEN	DO / SAY
0:00	Triage board	*"Harbourline is a seven-person property manager in Brisbane. Maintenance comes in by phone, web form, email and text. Every Monday someone sorts it by hand, and the gas leak gets buried under a dripping tap."*
0:20	Triage board	Walk the cards from the top (table below). *"Here's the weekend, triaged. The gas leak is at the top, and it noticed the after-hours transfer was never answered. It caught a duplicate across two channels, a repeat aircon fault, and it refused to guess which unit 8 a text meant."*
0:40	Reports (optional)	*"Airtable is the source of truth, with a live report on top."*
0:45	Talk to Jane	Input 1 (live for the video, or the earlier call's transcript and summary). *"Tenants can also just talk to Jane."*
1:00	Triage board	Point to the new Voice card. *"Make.com dropped it into the same Airtable base, triaged like everything else."*
1:10	Portal	Input 3: paste, attach the photo, submit. *"Now a new request, live, with a photo."*
1:35	Triage board	Open the Portal card's Details. *"Nothing is sent. A property manager approves every message."*
1:45	Close	*"Built tonight with Opus 5.5 in Claude Code. It runs on Sonnet, so a small agency could afford it every day."*

The weekend cards: what to point at

REQUEST	CARD SHOWS	POINT AT
02 gas	Emergency	Top of the board. Next: "the after-hours transfer was not answered". No gasfitter on the tradie list.
06 unit 8 lock	Emergency Call back	Eight properties have a unit 8: it won't guess.
05 power points	Urgent Job J-7050	Open since 1 August: chase Brightline. Rent threat goes under Things to confirm.
01 aircon	Routine Repeat fault	HPM-1130: fixed in September, failed again.
03 + 04 tap	Routine Duplicate of #3	Same tap reported by web form and by phone: one job, not two.
07 cat, TV bracket	Not maintenance	Routed to Grace; nothing approved or refused.
08 tradie report	Job update Repeat fault	J-7302, $2,380 hot water. Ceiling leak from unit 5/18 under Things to confirm.

If the live submit fails: "Here's one I submitted ten minutes ago" and point to it, or cut to the backup take.

After recording: delete the Portal and Voice test rows in Airtable Requests if you want a clean board for the next take, and run **npm run check** again only if the weekend cards changed.
